Business Model

E-Commerce Partnerships

- In app recommendations to purchase grocery items from online grocery providers such as Amazon Fresh & Prime Pantry and Instacart
- Average Online Delivery Grocery Purchase ~ $90
- MyFridge receives 5% of each grocery purchase the user makes through e-commerce partners (expectation of a 30% conversion rate)

Ad-Based Revenue

- Sponsored recipes prioritized and placed near the top of Suggested Recipes
- Sales and coupons to shop at nearby grocery stores (Safeway, Whole Foods, Trader Joe's, etc.) for expiring ingredients

Total U.S. Market

Total SF Market

These numbers were derived from the populations of young professionals and families with at least 2 children.

Risks & Mitigations

Top 3 Risks	Mitigation
Lifestyle change	Easy input and removal system, interactive notifications
Recommendations need to be worth the user's time	Recommendation system built closely with customer feedback, filters
Users don't use the in-app grocery purchasing feature	Targeted customers

Key Competitors

FRIDGELY

- $1.99 for access to all features
- Fridgely focuses on food wastage inventory tracking, and recipe recommendation system.
- Integrated coupon feature is difficult to use and receipt scanning feature lacks functionality.

No Waste

- Free of cost
- Uses analytics to produce goals for users and track food waste.
- Basic inventory sharing system is also integrated.
- App is cluttered and receipt scanning feature is poorly executed.

PantryCheck

- Free of cost
- Focus on making grocery budgeting easy
- Comprehensive list of common items is integrated well
- Features for adding items to inventory are limiting and manual input heavy

Customer Testimonials

"I like that I can explore recipes based on the ingredients I have. I used to spend so much time not knowing what to make and not touching the same random groceries in my fridge for weeks. "

- Helen Cheng, 24

"I'm amazed at how much money I used to waste throwing away produce that would expire before I even got the change to use it. All that changed once I started using MyFridge.

- Neha Vijaykumar, 22

"I really enjoy that I can manage the groceries in my fridge using this app. If I'm at the grocery store, I can easily check my virtual fridge to see what our family is running out of and exactly what quantities I need to buy.

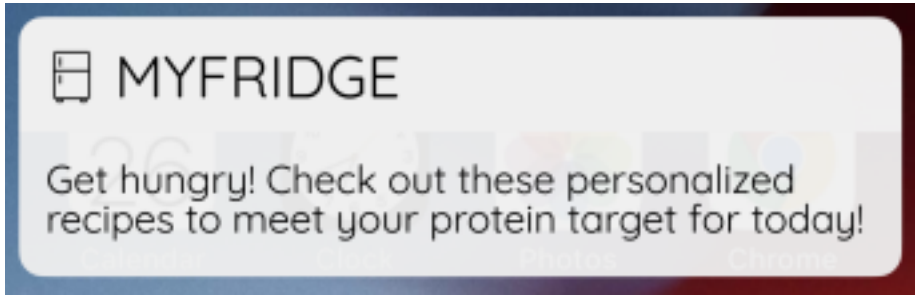
- Eric Lachman, 32

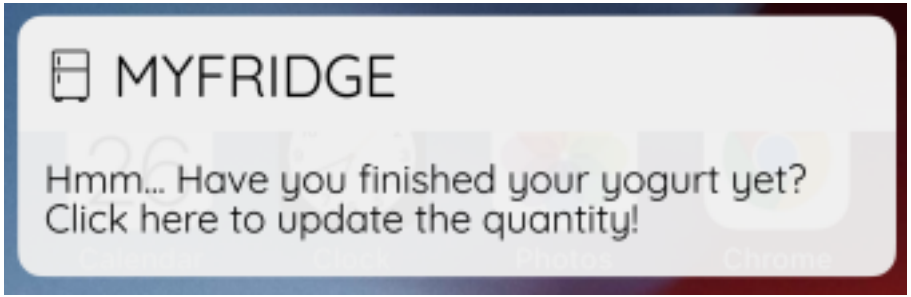
Metrics for Success

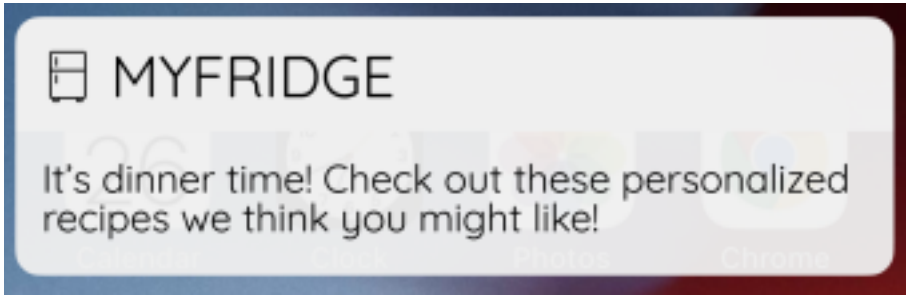
- Number of “active” users
  - “Active” users update inventory at least 4 times a week
- Conversion rate of “active” users into in-app grocery purchases over $5.00
- Retention rate of “active” users
- Frequency of use of each feature per a week over a month
  - Closely followed immediately after launch
- Mean time of user’s response to app notifications

Market Position

MyFridge is built to help you achieve your spending, cooking, and nutrition goals.

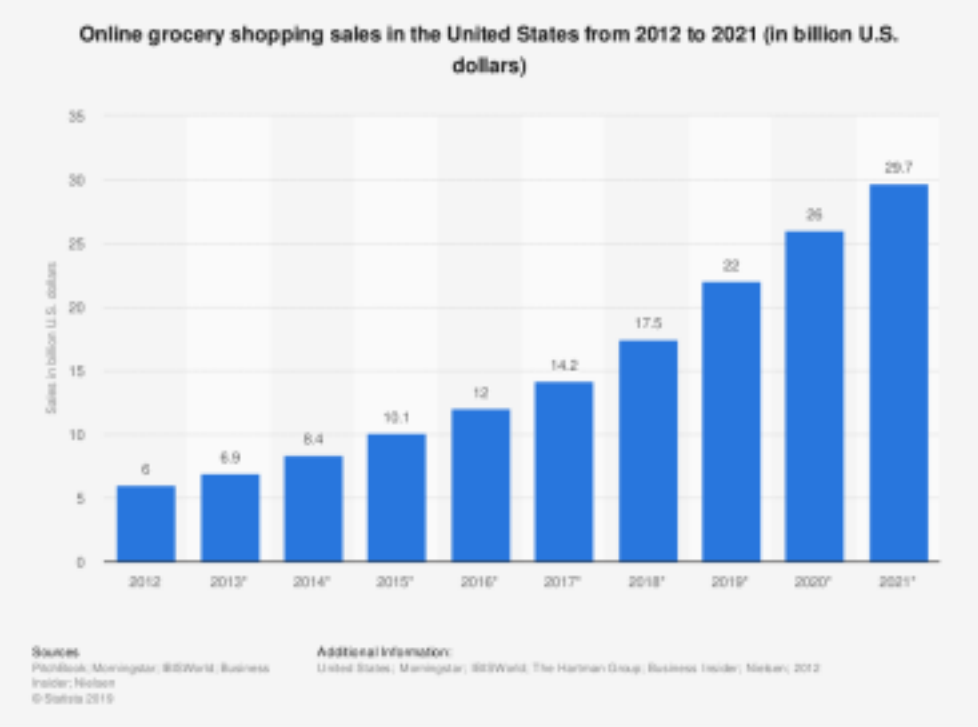






Market Opportunity

Market Opportunity



Ad Revenue

- 5,000 active users x 2 minutes spent on app per day x 2 ads per minute = 20,000 banner ads per day
- 20,000 x 1.5% = 300 average clicks
- 300 x 0.10 (RPM) = $30 per day

Other Risks & Mitigations

- Some of our target users prefer to order prepared foods via Uber Eats/DoorDash
- Large retail companies could develop their own apps

- Our ideal target customer is one who is also concerned with health and cost, both of which are usually compromised by ordering food with those delivery services
- Large retail companies would rather partner with us than try and reinvent our solution
